

ABSTRACT OF THE DISCLOSURE

The storage printer includes an image processing unit that analyzes an original image data acquired from an image data supply source to set image processing conditions and which processes the original image data in accordance with settings of the image processing conditions so as to produce outputting image data, a printing unit that makes a print using the outputting image data, a storage for storing a result of processing in the image processing unit and a reading unit that reads the result of processing from the storage and supplies it into either the image processing unit or the printing unit or both. In the storage printer, the pictures (or their image data) can be sorted and archived in a simple manner and reprints of the image which was previously printed can be easily made without receiving the image data again from a suitable image data supply source while bypassing personal computers and any other intervening equipment.
